

Propel – Microsoft Dynamics Integration

Speed Time to Market. Reduce Cost of Goods Sold.

OVERVIEW

Great companies leverage Propel to innovate and deliver high-quality products to market quickly while diligently managing cost at every level. This demands clear, real-time communication across distributed teams and systems, particularly between PLM and ERP.

The Propel-Dynamics integration, powered by Jitterbit, eliminates expensive errors, painful product delays, and wasted time typically associated with manual data entry.

This integration ensures your teams have the right visibility and insight at the right time.

WHAT IT DOES

- When new products are released to manufacturing from Propel, the item masters and Bills of Material (BOM) are created in Microsoft Dynamics
- When subsequent Engineering Change Orders (ECOs) are executed, the appropriate item masters and BOMs are updated in Dynamics
- As costs and inventory levels are updated in Dynamics, those changes are reflected in Propel

BENEFITS

Faster Time to Market

Giving procurement teams real-time visibility into product changes eliminates the devastating delays caused by miscommunication, misunderstanding, & human error.

Reduced Cost of Goods Sold

Giving engineers real-time visibility into cost and inventory levels enables them to make engineering decisions in line with the bottom line.

Reduced Operational Costs

Manual data entry is eliminated so your teams can focus on high value work.

Happier Customers

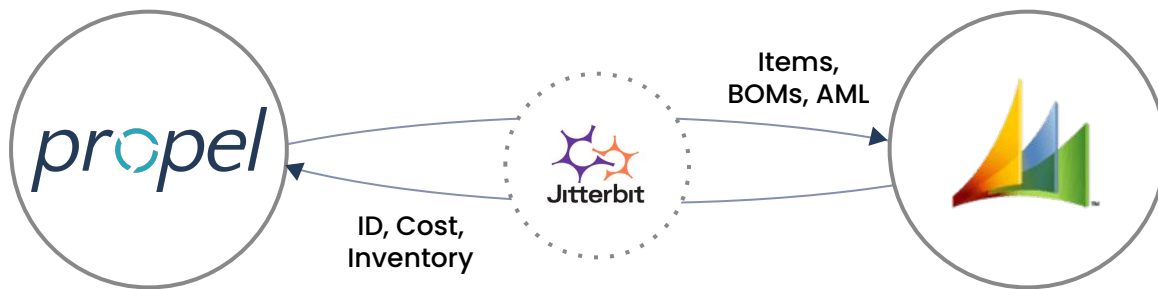

Delivering great products on time and on budget is great for business.

Propel – Microsoft Dynamics Integration

CAPABILITIES

- Items, BOMs, AML published from Propel to Dynamics
- Part cost information and inventory levels are published from Dynamics to Propel
- Integration is flexible and customizable with full support for Propel and Dynamics custom fields
- Best-in-class queueing & error handling ensures no data loss in the event of system downtime

According to Aberdeen Research, best-in-class companies were 40 percent more likely to have integrated PLM and ERP systems.

GETTING STARTED

Our cost-effective and proven integration can be deployed in just a few weeks with minimal time needed from your technical resources. If you prefer to use your own enterprise integration platform, our professional services team can provide guidance and support to your team as they conduct the deployment.

ABOUT PROPEL

Propel enables Product 360, the modern way to take products from concept to customer. Born in the cloud and built on Salesforce, Propel helps manufacturers collaborate across the entire value chain to get the right products to market faster and at higher margins.

ABOUT JITTERBIT

The Jitterbit API integration platform enables companies to quickly connect SaaS, on-premises, and cloud applications and instantly infuse intelligence into any business process. Jitterbit is a certified Netsuite technology partner.
